## SUMMARY

Recent Mechatronics Engineering graduate with two completed robotics projects integrating embedded systems, AI, and computer vision. Built an attendance-tracking robot using ESP32-CAM and OpenFace (92% accuracy) and a delivery robot with GPS and RFID. Proficient in C++, Python, and PLC programming, seeking an entry-level role in Robotics, Controls, or Automation Engineering

## WORK EXPERIENCE

**Computer Hardware Repair Technician, MicroLab** **July 2023 - October 2023**

- Diagnosed and repaired hardware faults in 50+ laptops and desktops with a 95% first-time fix rate.
- Installed and configured Windows and Linux (Kali/Ubuntu) operating systems
- Maintained detailed repair logs and delivered clear technical communication to clients
- Reduced diagnostic time by 20% through systematic troubleshooting methodology

**IT Support Assistant, XD Update** **July 2022 - June 2023**

- Provided technical support for hardware diagnostics and system reinstallation
- Assisted in maintaining IT infrastructure for daily office operations
- Communicated technical issues clearly to non-technical clients
- Documented support tickets and tracked resolution progress

**Feb 2020 - Jan 2021**

## EDUCATION

**Bachelor in Electrical and Mechanical Engineering** **October 2021 - June 2026**
Major in Mechatronics Engineering - Latakia University

**Relevant Coursework**

- Control Systems
- PLC & Industrial Automation
- Robotics & Kinematics
- Embedded Systems (Arduino/ESP32)
- Sensors & Actuators
- Power Electronics
- Mechanical Design (SolidWorks)
- Signals & Systems
- Microcontrollers
- Hydraulics & Pneumatics

### Bachelor Thesis

- Achieved 92% recognition accuracy using OpenFace deep learning embeddings
- Implemented a fuzzy logic controller for smooth line-following navigation
- Integrated ESP32-CAM for wireless video streaming and Python for real-time face matching

## ADDITIONAL INFORMATION

- **Languages:** Arabic (Native), English (Advanced), German (Beginner)
- **Technical Skills:**
  - Programming (Python, C++)
  - AI & Computer Vision (PyTorch, TensorFlow, LLMs Integration)
  - Control & Automation (PLC Ladder logic, Fuzzy Logic, PID control, n8n)
